3. The following is an examiner's statement of reasons for allowance:

Regarding claims **1,3,4 & 7** the prior art of record fails to teach a memory that stores header transformation information that shows correspondence between a pair of information in said layer 2 header and information in said layer 3 header in correspondence with information in said MPLS header. Prior art of records also fails to teach a processor that searches said header transformation information and transform said layer 2 header contained in a packet received from said first port to said MPLS header corresponding to said layer 2 header.

Regarding claim **13,14 & 15** prior art of record fails to teach a plurality of logical networks that are identified by an identifier in a said layer 2 header are configured in the network which does not use said MPLS protocol and determining to which network among plurality of the logical network a received packet belongs, using said identifier in said layer 2 header that is added to a received packet, when the packet is received from the network which does not use said MPLS protocol, checking the said correspondence (between identifier in layer 2 header and a label) and checking said correspondence when the packet is received from said MPLS network.

Regarding claim **19**, it was allowed in the previous office action by the examiner.
